

MANTSINEN LOAD TRACKING INTERFACE

Mantsinen Load Tracking Interface is an optional feature designed to further streamline material handling. It weighs the handled loads and transmits the data to the operator and the systems used in the terminal or port e.g., the Terminal Operating System. To make things even smoother, data transfer can also be automatized.

This time- and money-saving option **eliminates the separate weighing phase**, reduces manual labor **decreasing the possibility of errors**, and **enables real-time tracking**. All this contributes to **more efficient production and less waiting time**.

AUTOMATION

- Eliminates separate weighing e.g. using a truck weight scale station.
- Easy access to accurate real-time and past data and analytics.
- An integrated system makes it easier to comply with various regulatory requirements and

EFFICIENCY

- Reduces possibility of human errors.
- Real-time data on raw materials and finished products.
- Automatically generated orders.

PRODUCTIVITY

- Saves time and money.
- More in-depth information about production performance.
- Improved inventory management.

AGILE TWO-WAY COMMUNICATION TO SCALE DATA

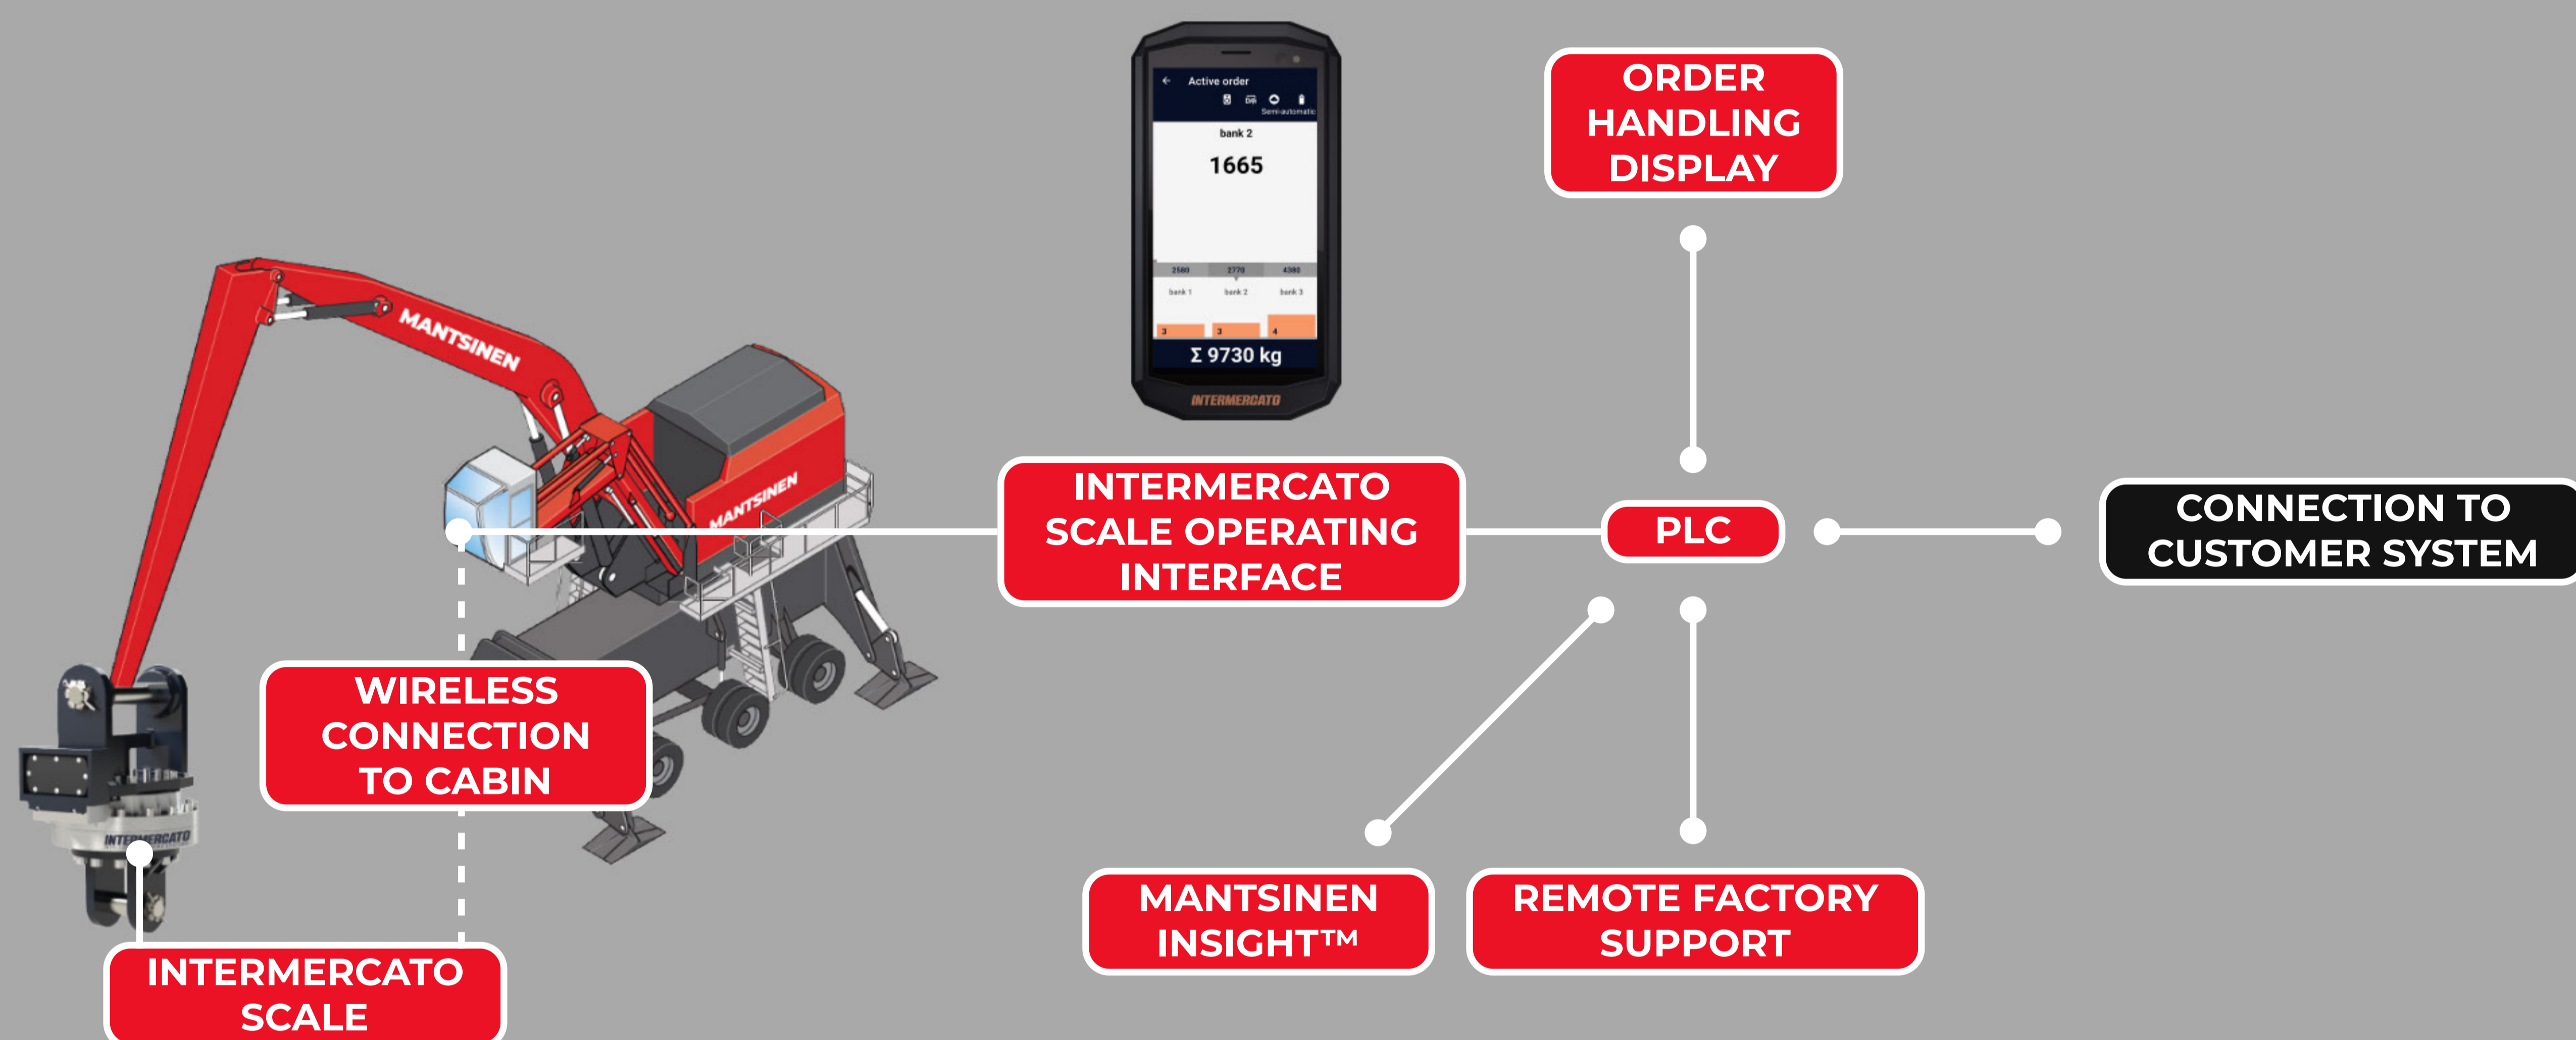

The Mantsinen Load Tracking Interface scales data through the PLC to the customer's system. A high-quality remote connection to Mantsinen's factory support and to Mantsinen Insight™ are also provided.

HOW DOES IT WORK

The Mantsinen Load Tracking Interface weighs the handled loads and transmits this data to the operator and the systems used (also automatically).

MANTSINEN DELIVERS

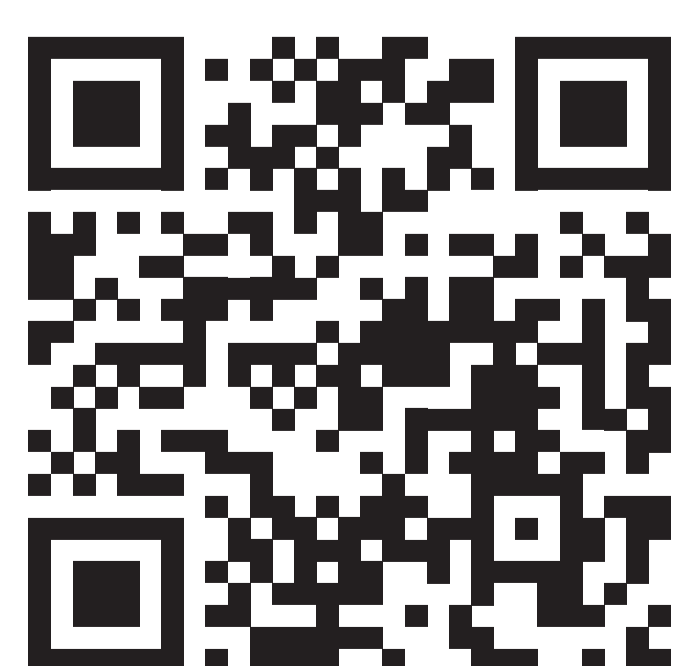

CUSTOMER SETS UP

HOW LOAD WEIGHING BECOMES PRODUCTIVITY DATA ON MANTSINEN INSIGHT™

- Record of weighing values.
- Creating tonnage data and value calculations.
- Summarizing weighings.
- Displays status of different connections.
